## Proposed Meeting Time Slots

The team leader proposed a project management methodology known as the **Agile Methodology**. Agile methodology includes concepts such as splitting large features into smaller, easier to comprehend Tasks. We have adopted **SCRUM** as our Agile Methodology due to its emphasis on a task and meeting scheduling routine called Sprints. **Our Sprints will be one-week periods**, instead of the preferred two week periods, due to time constraints. We are making full use of weekly **Sprint Reviews** and **Daily Standups**. **Daily Standups** are 15 minute meetings, occurring multiple times a week, that will be used to both discuss progress made by each team member from the previous day and to discuss plans that each team member plans to complete for the current day. Daily Standups will be helpful for keeping team members up-to-date with progress and roadblocks. After standups, we will open the forum to further questions and concerns. Our **Sprint Reviews** are full meetings that will occur once a week. During Sprint Reviews, all team members will Demo produced features and raise issues that came up during the Sprint. The **SCRUM Master** will then officially close the previous Sprint and officially start a new Sprint. **Tasks** will be created based on Client direction and they will be given order of priority during the current Sprint. Each team member will begin their next assigned Task based on the Sprint Backlog priority.

Below you will find a table with our proposed meeting days and times:

|                          | Sunday           | Monday           | Tuesday          | Wednesday        | Thursday                      | Friday           | Saturday         |

## Team Meeting Log

|             |            |          | Team Members Attendance<br>(S = Standup, F = Full)<br>(C = Att. Class, O = Off. Hours)  |                 |             |             |
|-------------|------------|----------|---|-----------------|-------------|-------------|
| Date        | Start Time | End Time | Meeting Notes / Completed Tasks   | Andrew Stephens | Gwen Alessi | Brian Mejia |
| pre-8/28/22 | -          | -        | <ul style="list-style-type: none"> <li>- Deployed AWS EC2 instance / researched dev-ops / and implemented Route 53 DNS registry, AWS Elastic IPs, EC2 Elastic (Application) Load Balancers</li> <li>- Deployed LAMP stack</li> <li>- Configured HTTPS certification</li> <li>- Established dev-ops connections and instructions for development programs</li> <li>- Explored Apache file structures</li> <li>- Created mock tables in database for relational testing and query testing</li> <li>- Created React components for testing</li> <li>- Updated manifest to contain proper information about the website.</li> <li>- Created Trello boards using SCRUM layout across all development fronts for increased productivity.</li> <li>- Formed AWS IAM credentials for team members for AWS project/billing access</li> <li>- Finished Task: Researched Agile development methodologies and adopted SCRUM for team management.</li> <li>- Finished Task: Discuss which university would be best for their Graduate/PHD programs.</li> <li>- Finished Task: Record Undergraduate Courses</li> <li>- Finished Task: Record Undergraduate Degrees</li> </ul> | *F              | *F          | *F          |
| 8/28/22     |            |          | - Updated React project packages.   |                 |             |             |
| 8/29/22     |            |          | <ul style="list-style-type: none"> <li>- Finished preliminary research on PHP security vulnerability handling with queries.</li> <li>- Finished task: Research on SRS requirements</li> <li>- Finished task: Preliminary research on MySQL stored procedures.</li> </ul>  |                 |             |             |
| 8/30/22     |            |          | <ul style="list-style-type: none"> <li>- Finished preliminary research on MySQL stored procedures.</li> <li>- Finished Task: Standardize the Undergraduate Programs</li> </ul>  |                 |             |             |
| 8/31/22     |            |          | - Minor changes to EC2 instance and other AWS services  |                 |             |             |
| 9/1/22      | 11:00 PM   | 2:30 PM  | - <b>Opened a team forum about concerns for the project.</b>  | F               | F           | F           |
| 9/2/22      | 11:00 PM   | 1:30 PM  | <ul style="list-style-type: none"> <li>- Research and implementation of React Router with role authorization.</li> <li>- <b>Asked team leader questions about Server and other concerns regarding the project Stack</b></li> </ul>  | F C             | F C         | F C         |

|         |          |          |  |       |       |       |
|---------|----------|----------|--|-------|-------|-------|
| 9/3/22  |          |          | - Further implementation of role-based authorization successful.   |       |       |       |
| 9/4/22  |          |          | - Explored options for login authentication<br>- Purchased Trello Premium  |       |       |       |
| 9/5/22  |          |          | - Updated Trello with tasks assigned for the next Sprint<br>- Created 3 Calendars (SCRUM Meetings, Class Schedule, Team Conflicts) and shared them with the team<br>- Tested Routing for authentication issues   |       |       |       |
| 9/6/22  | 12:30    | 2:30 PM  | - Covered prior advancements and the basic project trajectory going forward during the team meeting.<br>- Solidified team members (Andrew, Brian, Gwen) and team leader (Andrew)<br>- Worked on rough outline of the SRS document<br>- Copied over notes taken in class to the SRS document for easier access to information when writing document | F C O | F C O | F C O |
| 9/7/22  | 10:00 AM | 11:00 AM | - Reviewed User Constraints and Business Rules from class<br>- Assigned team Goals due for Thursday's class<br>- Used User Constraints rough draft to create a spreadsheet of information<br>- Updated SRS Use Case rough draft  | S     | S     | S     |
| 9/8/22  | 1:00 PM  | 3:00 PM  | - Reviewed User Constraints and Forbidden use  | F     | F     | F     |
| 9/9/22  | 10:30 AM | 11:00 AM | - Updated Use Cases spreadsheet with Explicit Requirements, Explicit Forbidden, and Client-Silent Constraints<br>- Initialized User Constraints rough draft for Tuesday's class  | S     | S     | S     |
| 9/10/22 |          |          | - Polished up the User Constraints draft due for Tuesday<br>- Refined the Proposal document<br>- Created and initialized a Proposal document   |       |       |       |
| 9/11/22 | 10:00 AM | 11:00 AM | - Discussed what the appropriate direction is for defining Use Cases<br>- Created Visitor, Student, Faculty and Administrator Use Case Diagrams<br>- Cleaned up all User Constraints   | S     | S     | S     |
| 9/12/22 | 10:00 AM | 5:30 PM  | - Reviewed Use Case Diagrams in Standup<br>- Edited Visitor, Student, Faculty, Administrator Use Case Diagrams<br>- Created Researcher Use Case Diagram<br>- Assisted other team members with finishing their Use Case Diagrams<br>- Recorded Visitor, Student, Faculty, Administrator, and Researcher Use Case Statements to SRS                  | S F   | S F   | S F   |
| 9/13/22 | 12:00 PM | 3:30 PM  | - Cleaned up Use Case draft in preparation for class   | F O   | F O   | F O   |

|         |                     |                     |   |     |     |     |
|---------|---------------------|---------------------|---|-----|-----|-----|
| 9/14/22 | 9:00 AM             | 10:00 AM            | <ul style="list-style-type: none"> <li>- Reviewed what necessary changes need to be made to Use Case Diagrams and Use Case Statements</li> <li>- Altered User Constraints, Use Case Diagrams, and Use Case Statements</li> <li>- Primed the Proposal Document for final edits for Thursday</li> </ul>   | S   | S   | S   |
| 9/15/22 | 12:30 PM            | 3:00 PM             | - Completed Final copy of the Proposal Document   | F   | F   | F   |
| 9/16/22 | 10:00 AM            | 11:00 AM            | <ul style="list-style-type: none"> <li>- Worked on revisions provided by Prof. Gupta for the SRS</li> <li>- Updated Use Diagrams to remove unnecessary ones as stated by Prof. Gupta</li> <li>- Compiled a brief list of Entities for our Database</li> <li>- Worked on revisions provided by Prof. Gupta for the SRS</li> <li>- Updated Use Diagram to remove unnecessary ones as stated by Prof. Gupta</li> <li>- Added to the list of Entities for our Database</li> <li>- Worked on revisions provided by Prof. Gupta for the SRS</li> <li>- Updated Use Diagram to remove unnecessary ones as stated by Prof. Gupta</li> <li>- Added to the list of Entities for our Database</li> </ul> | S   | S   | S   |

## Problem Statement

The goal is to design and implement a web based dynamic registration system to be used at Aleutian Islands University. The system will be a multi-user system split into Students, Faculty, Administration and Research Staff. The system will be implemented in such a way that each of these users will have different levels of access to functions. Functions will provide access to data for user roles who have explicitly stated access to it. Since the system will be accessed by different types of users, there will be a variety of use cases.

## Proposed Implementation

**The Website** will be hosted through AWS (Amazon Web Services). We will use a free tier Ubuntu EC2 instance and **the Server** will also utilize many other AWS features for better functionality. Route 53 will be used for both domain registration and recording subdomains. Certificate Manager will be used to declare HTTPS certifications. Elastic IP will be used to preserve public access to the website address if the instance must be disconnected. Elastic Load Balancers, such as Application Load Balancers, will be used to redirect port 80 connections through port 443 for enforced HTTPS use. The server itself will make use of the LAMP stack (using Ubuntu, Apache, MySQL and PHP).

The **Front-end** will use the React (ReactJs) framework. With React, we will use the language of Typescript (which is a strictly-typed derivative of Javascript).

The **Back-end** will use API connections through MySQLi, which is a relational database driver that is used in PHP to provide an interface with the MySQL database. Security will be an important consideration, so the API will make use of Prepared Statements as well as Parameter and Result Bindings.

This proposed implementation is, of course, subject to change and we will provide the necessary updates to the client if said changes occur.

## Post Implementation Run Down

The proposed web application was implemented in the way it was proposed, with a combination of the React framework and TypeScript for the front end, and API calls using MySQLi to the MySQL Database, PHP, and Stored Procedures in the back end. The system functions as specified in the below Use Cases, delivering a truly dynamic system for the client and users.

The initial step towards implementation, and a system that aided us for the duration of this project, was the usage of Trello. Trello is a web-based, kanban-style, list-making application that we used for the organization and execution of tasks as a group. We began by separating the tasks at hand into one of six categories: Back-End, Database, Dev-Ops, Front-End, Queries and Documentation. This system aided in the breaking down of tasks for the individuals on the team, and deciding which tasks were done by those with a strong set of skills in that field. Team Lead Andrew Stephens was in charge of delegating the tasks to the other members of the team, Gwen Alessi and Brian Mejia.

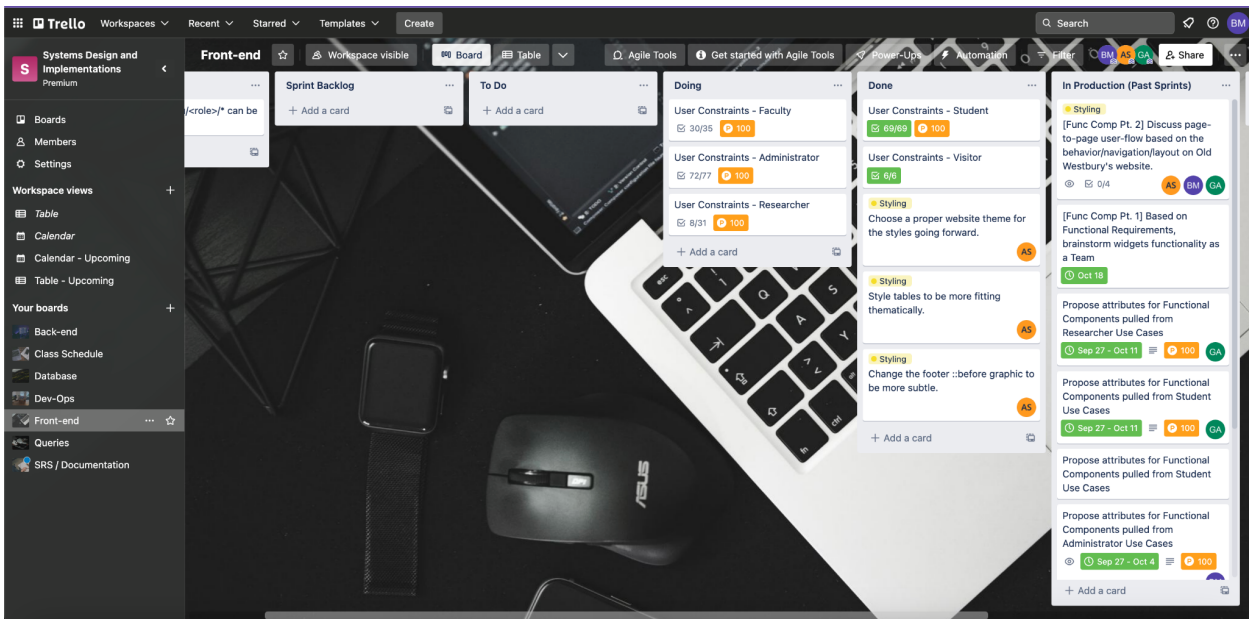

Image of the Trello Board used for the project

After the splitting up of tasks, the following weeks were used to build the foundation of the web application, the database. The data that resides inside of it was generated primarily by hand, including student histories, course sections, advisor/advisee relationships, etc. Few was generated automatically, only personal information of the users such as street addresses, phone numbers and names. Course Catalog information was taken from

the SUNY Old Westbury website, with explicit permission from the client. MySQL was used as the Relational Database Manager

Once the data was generated, tested and finalized, the website was next in production. The website was hosted as stated above, using Amazon Web Services and the free-tier Ubuntu EC2 instance that they provide. We also used Elastic IP to ensure that access to the website was preserved even if the instance needed to be restarted for whatever reason. The server used the LAMP Stack as stated above for creation of the web application.

An image of the AWS instance hosting our website

Use case implementation followed, which led us through the ending of the allotted time for this project. Use Cases were handled by both React, and its ability to dynamically change components that have been generated depending on the data that is being returned, and MySQL stored procedures, which allows for the execution of SELECT, INSERT, UPDATE, and DELETE statements quickly and efficiently from the front end. Both required and forbidden functionalities were handled with this combination.

Were there more time, the group would have implemented another semester of data beyond the Spring 2023 semester, as the system is truly dynamic from top to bottom. Very little to no hard coding was done on either the front end or back end of the system to ensure that this web application could be used for any upcoming semester. Other desired additions would be the hosting of an email server on our website, for easier communication of events between different users. Overall, from this project we learned valuable time management skills, the process of implementing a website from the ground up and the focusing on individual strengths that contribute to the group's goals.
